COPYRIGHT AND RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials. The various state privacy acts govern the use of materials that document private individuals, groups, and corporations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a reproduction if the document does not infringe the privacy rights of an individual, group, or corporation. These specified conditions of authorized use include:

- non-commercial and non-profit study, scholarship, or research, or teaching
- criticism, commentary, or news reporting
- as a NPS preservation or security copy
- as a research copy for deposit in another institution

If a user later uses a copy or reproduction for purposes in excess of "fair use," the user may be personally liable for copyright, privacy, or publicity infringement. This institution's permission to obtain a photographic, xerographic, digital, or other copy of a document doesn't indicate permission to publish, exhibit, perform, reproduce, sell, distribute, or prepare derivative works from this document without first obtaining permission from the copyright holder and from any private individual, group, or corporation shown or otherwise recorded.

Permission to publish, exhibit, perform, reproduce, prepare derivative works from, sell, or otherwise distribute the item must be obtained by the user separately in writing from the holder of the original copyright (or if the creator is dead from his/her heirs) as well as from any individual(s), groups, or corporations whose name, image, recorded words, or private information (e.g., employment information) may be reproduced in the source material. The holder of the original copyright isn't necessarily the National Park Service. The National Park Service is not legally liable for copyright, privacy, or publicity infringement when materials are wrongfully used after being provided to researchers for "fair use."

This institution reserves the right to refuse to accept a copying order if fulfillment of the order is judged in violation of copyright or federal or state privacy or publicity law.

RIGHTS STATEMENT FOR ARCHIVAL DESCRIPTION

Pursuant to 17 U.S.C. § 105, copyright protection under this title is not available for any work of the United States Government, but the United States Government is not precluded from receiving and holding copyrights transferred to it by assignment, bequest, or otherwise.

HISTORY

On February 11, 1933 President Herbert Hoover used his authority under the Antiquities Act and signed a proclamation designating Death Valley National Monument. Resource management progressed slowly in the early days of the monument, as the primary focus was on developing infrastructure, but the monument staff moved forward with some inventorying of species and collecting historic objects for the museum collection.

Natural resources were a primary emphasis, with the park hiring its first seasonal Naturalist in 1937, and staff pushed forward on specific problems confronting the monument. Burro management began in 1939, and has continued using a variety of methods. Exotic plant management began in 1947. In 1952 Devil's Hole became a part of the monument, and with that the management of Devil's Hole pupfish.

Cultural resource management also moved forward, however slowly. Cultural resources took a secondary position to natural resources, and the monument was able to acquire little funding to protect them. The monument depended on universities to complete archeology work, and on private funding to complete historic restoration work. A major change in cultural resource management came with the National Historic Preservation Act (NHPA), giving staff a tool to raise the profile of cultural resources.

Mining was allowed in the monument under the Mining Law of 1872 and an Act to extend U.S. mining laws into Death Valley National Monument, June 13, 1933. The Mining in Parks Act of 1976 gave the monument staff new powers to oversee mining in the monument, and to regulate it as necessary for preservation.

Legislative changes had a massive impact on the development of both natural and cultural resources programs. Legislation like the NHPA, the Archaeological Resource Protection Act, the National Environmental Policy Act, the Mining in Parks Act, the Wilderness Act, and the Endangered Species Act all helped to reinforce and clarify the role of resource management.

The Resources Management Division was created in 1984. It combined many typical and already existing natural and cultural resource management functions, along with the unique feature of mining in Death Valley National Monument. The creation of the division furthered the gradual process of specialization and professionalization of resource management. The California Desert Protection Act, which was signed into law in 1994, made Death Valley a National Park, and designated much of the park as wilderness.

The Timbisha Shoshone Tribe are the native people of Death Valley. Western Shoshone and Paiute people once occupied several villages scattered throughout the region, but today only the village of Timbisha at Furnace Creek remains within what is now Death Valley National Park.

In 1983, the Timbisha Shoshone became a federally recognized Native American tribe by the United States government. The California Desert Protection Act was signed into law in 1994, and it directed the Secretary of the Interior to conduct a study of suitable lands for the Timbisha Shoshone Homeland, both inside and outside of the park. In November,

2000 the Timbisha Shoshone Homeland Act was signed into law, officially providing land in trust to the Tribe on which the Tribe can live permanently and govern the Tribe's affairs within the ancestral homeland of the Tribe outside and within the Park.
